Structure of the horseradish peroxidase isozyme C genes.";

Eur. J. Biochem. 173:681-687(1988).

-1- FUNCTION: REMOVAL OF H(2)0(2), OXIDATION OF TOXIC REDUCTANTS, BIOSYNTHESIS AND DEGRADATION OF LICONIN, DEFENDE RESPONSE TOWARD WOUNDING AND METABOLISM OF AUXIN. THESE FUNCTIONS MIGHT BE DEFENDENT ON EACH ISOZYME/ISOFORM IN EACH PLANT TISSUE.

-1- CATALYTIC ACTIVITY: DONOT + H(2)0(2) - OXIDIZED donor + 2 H(2)0.

-1- COFACTOR: Binds 1 protoheme IX and 1 iron(III) ion.

-1- SIMILARITY: BELONGS TO THE PEROXIDASE FAMILY. PLANT PEROXIDASE SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PRXC1B OR HPRC2.

-1: FUNCTION: REMOVAL OF H(2)0(2), OXIDATION OF TOXIC REDUCTANT BIOSYNTHESIS AND DEGRADATION OF LIGNIN, DEFENSE RESPONSE TO WOUNDING AND METABOLISM OF AUXIN. THESE FUNCTIONS MIGHT BE DEPENDENT ON EACH ISOZYME/ISOFORM IN EACH PLANT TISSUE.
-1: CATALTYIC ACTIVITY: Donor + H(2)0(2) = oxidized donor + 2:
-1: COPACTOR: Binds 1 protoheme IX and 1 iron(III) ion.
-1: TISSUE SPECIFICITY: ROOTS.
-1: SIMILARITY: BELONGS TO THE PEROXIDASE FAMILY. PLANT PEROXII

FUNCTION: REMOVAL OF H(2)O(2), OXIDATION OF TOXIC REDUCTANTS, BIOSYNTHESIS AND DEGRADATION OF LIGNIN, DEFENSE RESPONSE TOWARD WOUNDING AND METRADALISM OF AUXIN. THESE FUNCTIONS MIGHT BE DEPENDENT ON EACH ISOZYME/ISOFORM IN EACH PLANT TISSUE.

CATALYTIC ACTIVITY: DONOT + H(2)O(2) = OXIGLED donor + 2 H(2)O COFACTOR: Binds 1 protoheme IX and 1 iron(III) ion.

SIMILARITY: BELONGS TO THE PEROXIDASE FAMILY. PLANT PEROXIDASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DFVAAMIRMGNVGVLTGTAGQIRRNCRVVNS

NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is a valiable and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between then are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                               Sasaki, T., Matsumoto, T. and Yamamoto, K.
